Harmonic Environments Debuts Harmonic Cascade™ Waterfall

Stuart, Fla., March 28, 2007 – Harmonic Environments, Inc., a leading designer of indoor water features, has introduced an innovative new waterfall concept called the Harmonic Cascade™.

This water feature uses reflected light to create a luminous effect. It is the newest addition to Harmonic Environments' Translucence Series™ of waterfalls and can be specified as a seamless panel in almost any size and shape.

Harmonic Environments has installed two Harmonic Cascade waterfalls to date, one at River Terrace, a condominium development in Manhattan, and another at The Andrews Institute in Gulf Breeze, Fla. Four new Harmonic Cascade waterfalls are slated for installation during the second quarter of 2007.

Based in Stuart, Fla., the company currently offers water feature designs of every conceivable size and shape for private residences, healthcare institutions, offices, hotels and spas.

Harmonic Environments was founded in 1987 by Steven Wander, who pioneered the concept of high-quality, customized interior waterfalls for commercial and residential use. Twenty years later, the company continues to lead the industry with innovation in engineering, materials and design.

Wander's visionary approach to indoor water feature design and engineering has earned Harmonic Environments a reputation for quality and reliability with architects, interior designers and contractors. More information can be found at www.harmonicenvironments.com.

Editor's Note: Images of the Harmonic Cascade are available on request.
